Thickness: 0.50mm

Weight: 1.73 kg / m²

Open Area: 57%

Material: Stainless Steel Grade 304 to BS EN 1.4301

Sheet Size: 1250mm LWD x 1250mm SWD

All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Available in sheets or coil form (certain products only). Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process. Additional specification variations are available, please contact us for more information.
