| Weight: | 2.70 kg / m ² | Open Area: | 53% |

Material: Stainless Steel Grade 304 to BS EN 1.4301
Sheet Size: 1250mm LWD x 2500mm SWD

All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Available in sheets or coil form (certain products only). Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process. Additional specification variations are available, please contact us for more information.
