Weight: 17.29 kg / m²

Open Area: 52%

Material: Mild Steel – Hot Rolled to BS EN 10111

Sheet Size: 2440mm LWD x 1220mm SWD

All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Available in sheets or coil form (certain products only). Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process. Additional specification variations are available, please contact us for more information.
