| Weight: | 7.15 kg / m ² | Open Area: | 68% |
| Material: | Mild Steel – Hot Rolled to BS EN 10111 | | |
| Sheet Size: | 2440mm LWD x 1220mm SWD | | |

All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Available in sheets or coil form (certain products only). Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process. Additional specification variations are available, please contact us for more information.
