Weight:	3.47 kg / m ²	Open Area:	33%

Sheet Size: 595mm LWD x 595mm SWD – Plus custom sizes made to order.

Material: Aluminium – Grade 1050 H14

All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Available in sheets or coil form (certain products only). Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process. Additional specification variations are available, please contact us for more information.
