Sheet Size: 1250mm LWD x 2500mm SWD.

Custom sizes available up to 2000mm LWD max.

Material: Aluminium – Grade 1050 H14 & Others.

All expanded metal products are manufactured from a single piece of raw material and are created as a continuous mesh with no joints or loose strands. The finished product has a greater strength to weight ratio than the un-expanded parent material. Available in sheets or coil form (certain products only). Expanded metal by its very nature is a green product with almost no wastage arising from the manufacturing process.
Additional specification variations are available, please contact us for more information.
